

North Dakota Homeless Population Point in Time Survey January 25, 2006

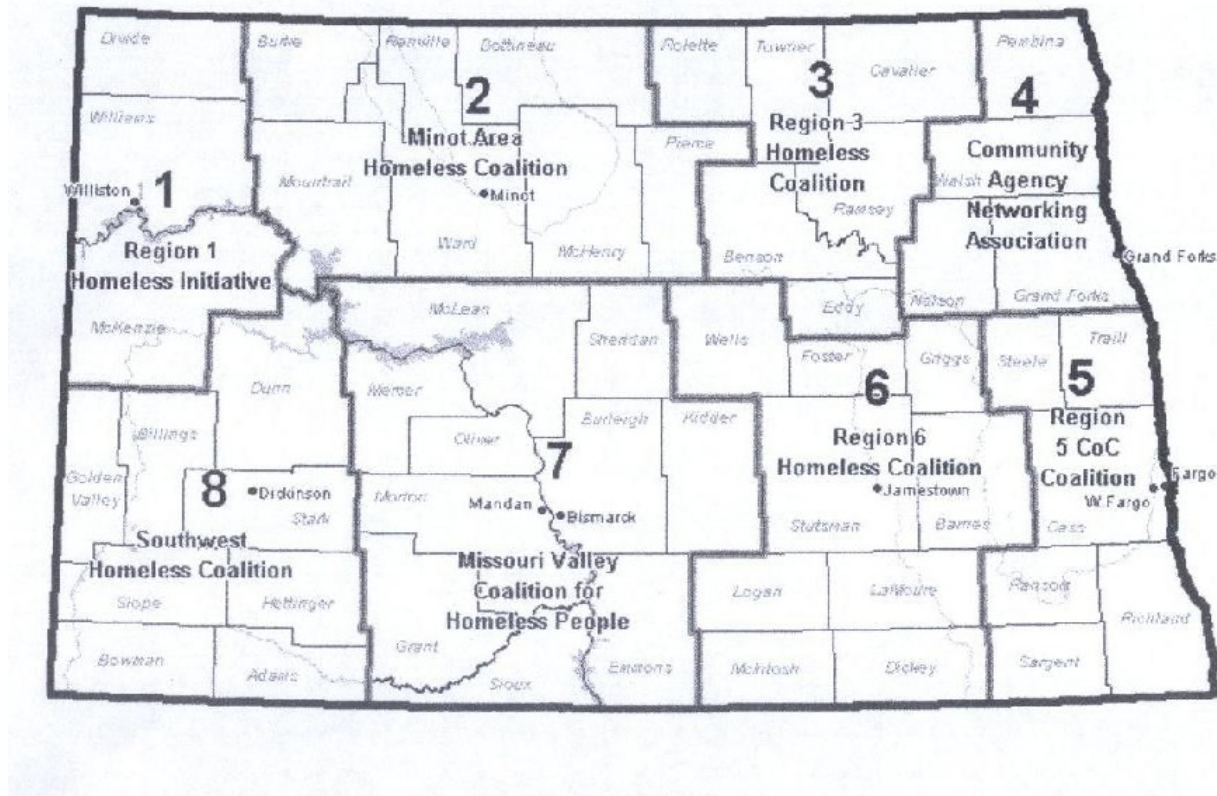

The North Dakota Coalition for Homeless People (NDCHP) conducted a statewide point-in-time survey of homeless people on January 25, 2006. The survey collected information relating to demographics, education, employment, veteran status, common characteristics, and service utilization.

The following table shows the total count of homeless persons by region, age and status as “chronic” or “long term homeless”.

Region	Adults	Children <18	Total persons	Chronic*	Long Term Homeless**
1	19	5	24	2	7
2	30	20	50	0	6
3	54	38	92	7	20
4	90	25	115	16	19
5	208	45	253	63	79
6	30	0	30	15	15
7	96	54	150	12	31
8	19	6	25	7	8
Total ND	546	193	739	122	185

2006 Chronic status is determined using the HUD definition, which is an individual with a disabling condition who has been homeless for at least one year or, four or more times in the last three years.

** Long term homeless (LTH) is the definition adopted by the ND Interagency Council on Homelessness, which is an individual or a family with a disabling condition who has been homeless continuously for at least one year or more than four times in the last three years. The ICH definition does not exclude people who are currently living “doubled up” with friends/family.

In general, there is a high degree of consistency in the survey data between 2005 and 2006. A few items of note:

- **Total count.** 739 homeless people were counted in North Dakota's 2006 point in time survey. This is an increase of 84 people from 2005. The majority of that difference can be accounted for in better survey methodology/participation – Region 3 reported 0 homeless in 2005 and 92 homeless in 2006.
- **Type of shelter**
 - North Dakota's long term homeless are twice as likely as the total homeless population to report living in an "unsheltered" location (11% compared to 6% for total pop).
 - There were 225 individuals who spent the night in an emergency shelter, according to the point in time. 61 of those were "long term homeless", which represents 27% of the total emergency shelter population.
 - 13% of the long term homeless were staying with family/friends. The prevalence of this type of shelter varied by region (highest in Region 3). The survey did not seek out individuals who were "doubled up" but rather, was designed to count them in a separate category if they were seeking services from a participating agency on the day of the survey.
- **Duration and frequency of homelessness**
 - The average homeless person in North Dakota has been homeless for 182 days. For the long term homeless, the average duration of homelessness is 2 years.
 - Half of the homeless population in the state reported 1 episode of homelessness in the last 3 years (same proportion for long term homeless). However, the long term homeless are three-times as likely as the total population to report four or more episodes of homelessness in the last 3 years (31% compared to 13% for total population).
- **Family status**
 - 18% of the total homeless population reported that they were traveling with family (15% of the total population reported having children under the age of 18). For the long term homeless, 9% had family with them; 6% of survey respondents had children under age 18 (25 children in 11 families).
 - 3% of long term homeless households (4 households) are headed by someone under age 18. Another 9% by young adults (age 18-21).
- **Characteristics of Long Term Homeless Population**
 - One-third of the homeless population in the state is American Indian. Just over half are White.
 - Only 15% (13% of total population) do not have at least a high school diploma or GED.
 - 36% report earning income from a job. 23% receive income from SSI and 18% receive help from family and friends. 55% report that they are unemployed (20% claim status as "employed").
 - 61% have a history of substance abuse; 49% a history of mental illness.

- 65% report not being able to afford rent and 56% report having money management problems. 40% list “bad credit” as an issue.
- 21% of the long term homeless are veterans (12% of total homeless pop).
- 52% report having medical problems. 18% state that they have a developmental disability.
- **Reasons for Homelessness**
 - Half of the long term homeless population says that Substance Abuse is a reason for their homelessness.
 - One-third say they are homeless because they cannot afford rent (35%) or because they have a mental illness (34%).
 - 18% list criminal background as the reason for homelessness; 9% list status as a parolee/probationer, and 16% note bad credit as an issue.
- **Service Needs**
 - Transportation and Permanent Housing are listed in all regions and by all subpopulations as the most difficult services to access.
 - One-third of the population states that obtaining a Job and/or Housing that is affordable and/or available to them would be the services that would most help them obtain housing.

The 2005 and 2006 survey results for the state of North Dakota are shown below. The results are listed by question.

1. Where was the survey taken?

2005 Total ND	2006 Total ND	2006 Chronic ND	2006 LTH	
3%	3%	3%	4%	Outdoors
45%	34%	43%	35%	Emergency shelter
36%	30%	30%	26%	Transitional housing
1%	3%	2%	2%	Motel
14%	21%	13%	26%	Other (abandoned building, auto, hospital, agency office)
	7%	9%	8%	No answer

n=479

4. How long have you been homeless?

2005 Total ND	2006 Total ND	2006 Chronic ND	2006 LTH	
9.6 days	13.2 days	9.3 days	12 days	Average # days (if homeless less than 1 month)
4.6 mo	4.9 mo	4.8 mo	4.7 mo	Average # months (if homeless less than 1 year)
4.0 yr	3.7 yr	4.6 yr	4.1 yr	Average # years (if homeless 1 year or more)
1.4 yr	1.5 yr	4.1 yr	3.6 yr	Average length of time homeless (for entire survey population)
	23	2	5	No answer
	10 days	8 days	8.5 days	Median # days (if homeless less than 1 month)
	4.0 mo	4.0 mo	4.0 mo	Median # months (if homeless less than 1 year)
	2.0 yr	3.0 yr	3.0 yr	Median # years (if homeless 1 year or more)
	0.5 yrs	2.3 yrs	2.0 yr	Median length of time homeless (for entire survey population)
	23	2	5	No answer

n=493 n=120 n=147

*Table note: A "median" is the mid-point of the dataset, which means exactly 50% of the respondents are above that number and 50% are below. The median does a better job of accounting for "outliers" in the data (i.e., one respondent that is much higher or lower than all the others can skew the results when you use an average).

5. How many times have you been homeless in the past 3 years?
